Art Unit: 2622

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, 15 and 16, drawn to a scanner having a document edge sensor for detecting a leading edge and a trailing edge of the document being transported by a transport mechanism, drive mechanism on/off control in response to sensor output, and a camera for detecting a skew angle of the leading edge and/or the trailing edge.
 - II. Claims 11-14, drawn to a scanner having a camera moving in a first and a second direction below a document platform for scanning a document, a start label and a home label for assisting in executing and stopping the camera, respectively.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as in a scanner that does not require a document transport and a sensor for detecting edges of the document being transported, and invention I has a separate utility such as in a scanner of document feeding type that does not have a document platen under which a camera moves during scanning. See MPEP § 806.05(d).
